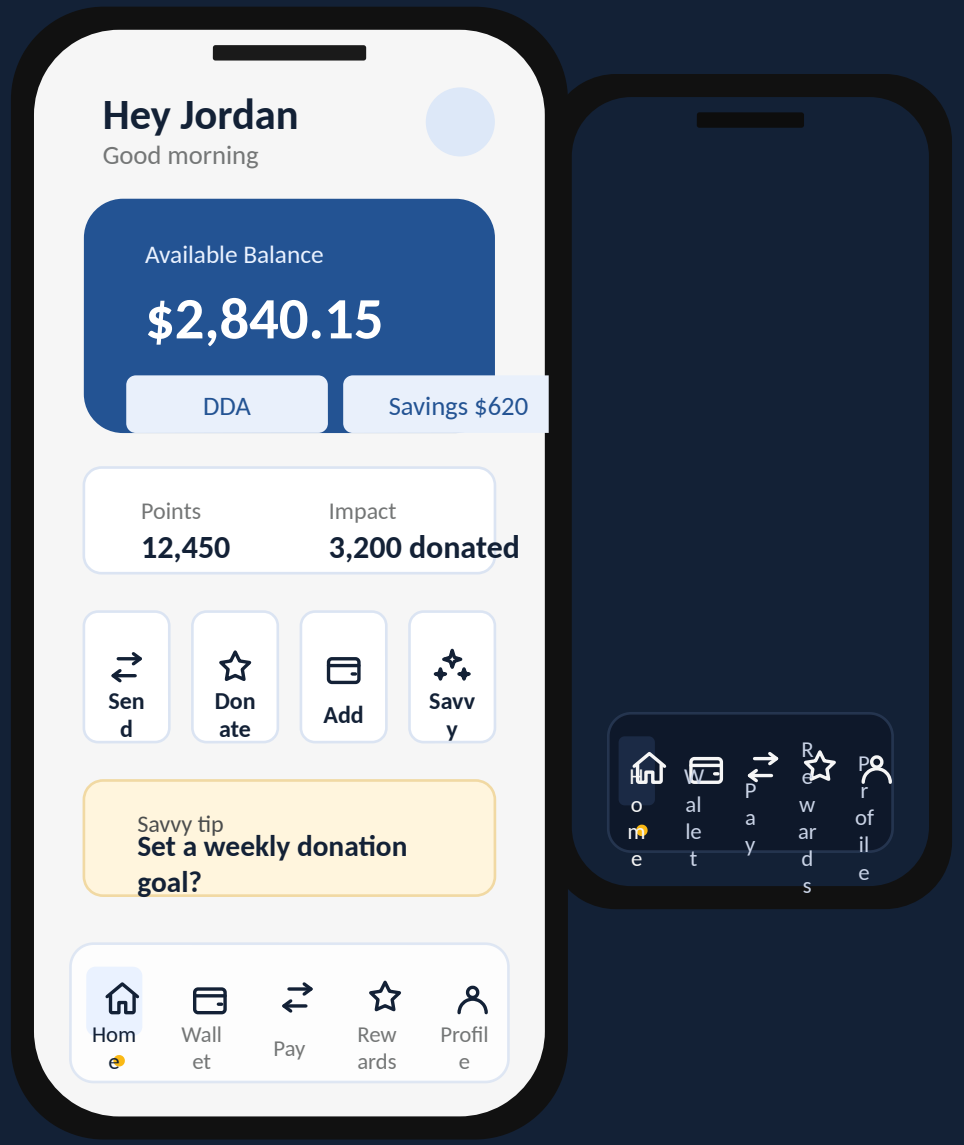
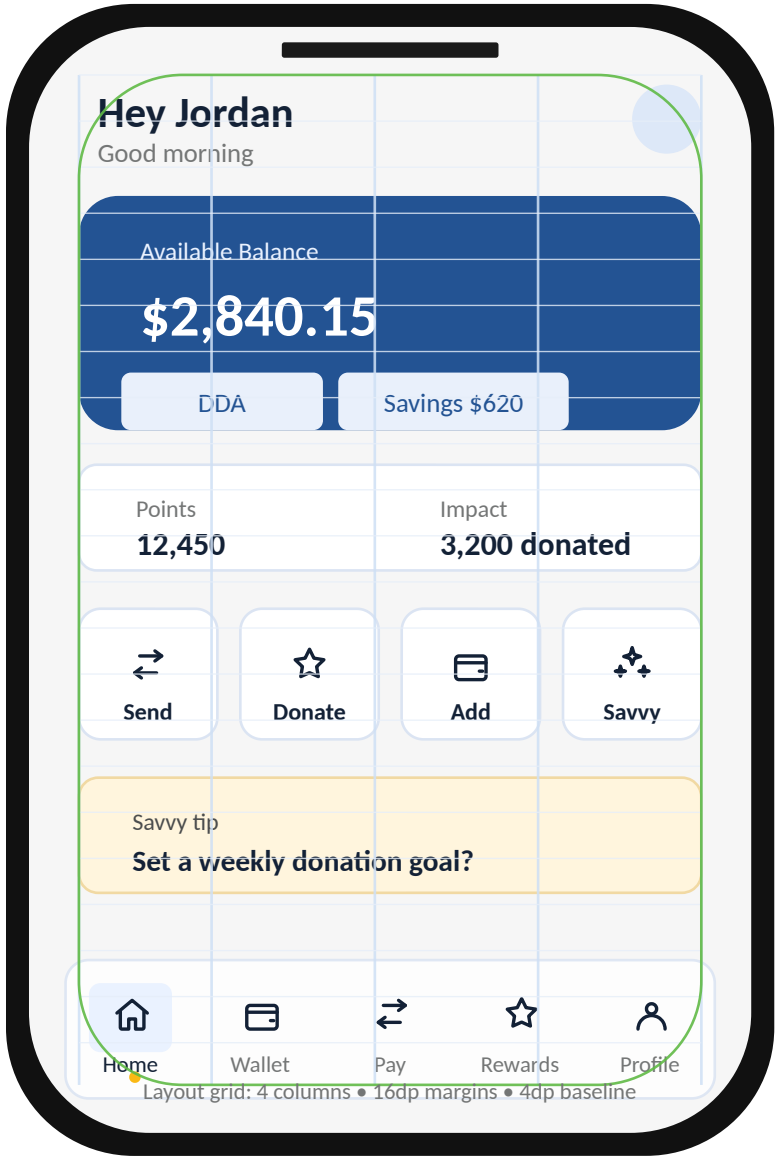
Swipe Savvy Mobile Wallet

Alignment • Responsiveness • Modern Tab Icons • Dark Mode (v5)



Alignment system

A single grid + spacing tokens eliminates layout drift across screens.



Rules

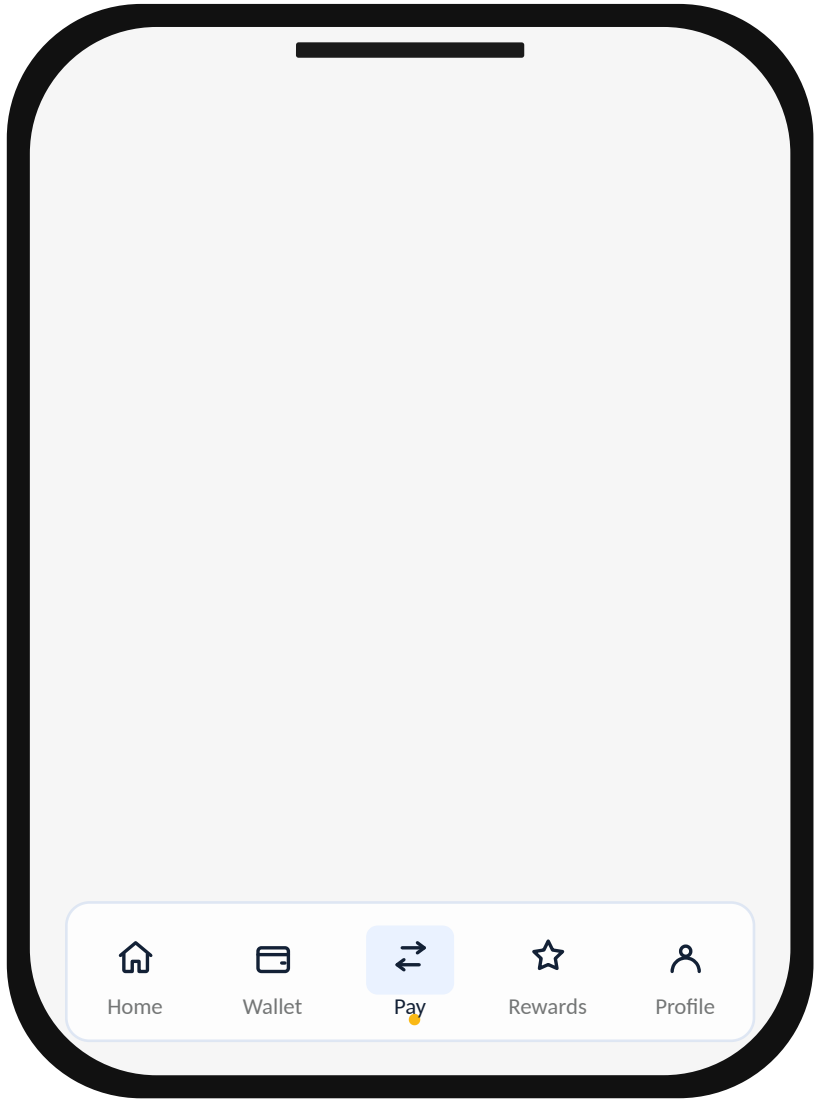
Margins	16dp (compact/standard) / 20dp (large)
Grid	4 columns with consistent gutters
Baseline	4dp vertical rhythm
Tap targets	44px min • labels always present
Financial text	Never truncate amounts

Outcome: faster design iteration + predictable engineering constraints.

Bottom navigation — modern translucent icons

Inactive = translucent • Active = bubble + dot • Labels retained for Gen-X clarity

Light mode

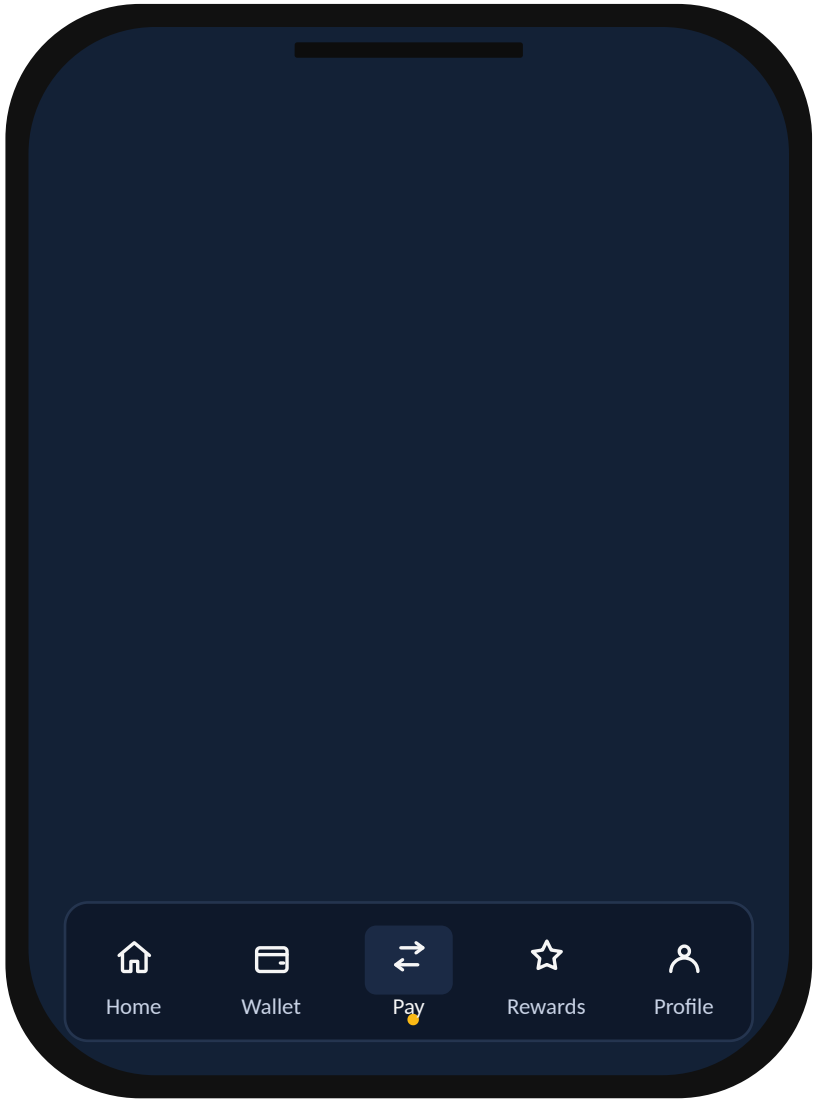


Opacity (inactive)

Light: 45%
Dark: 55%

Tap target: 44px+
Icon grid: 24px

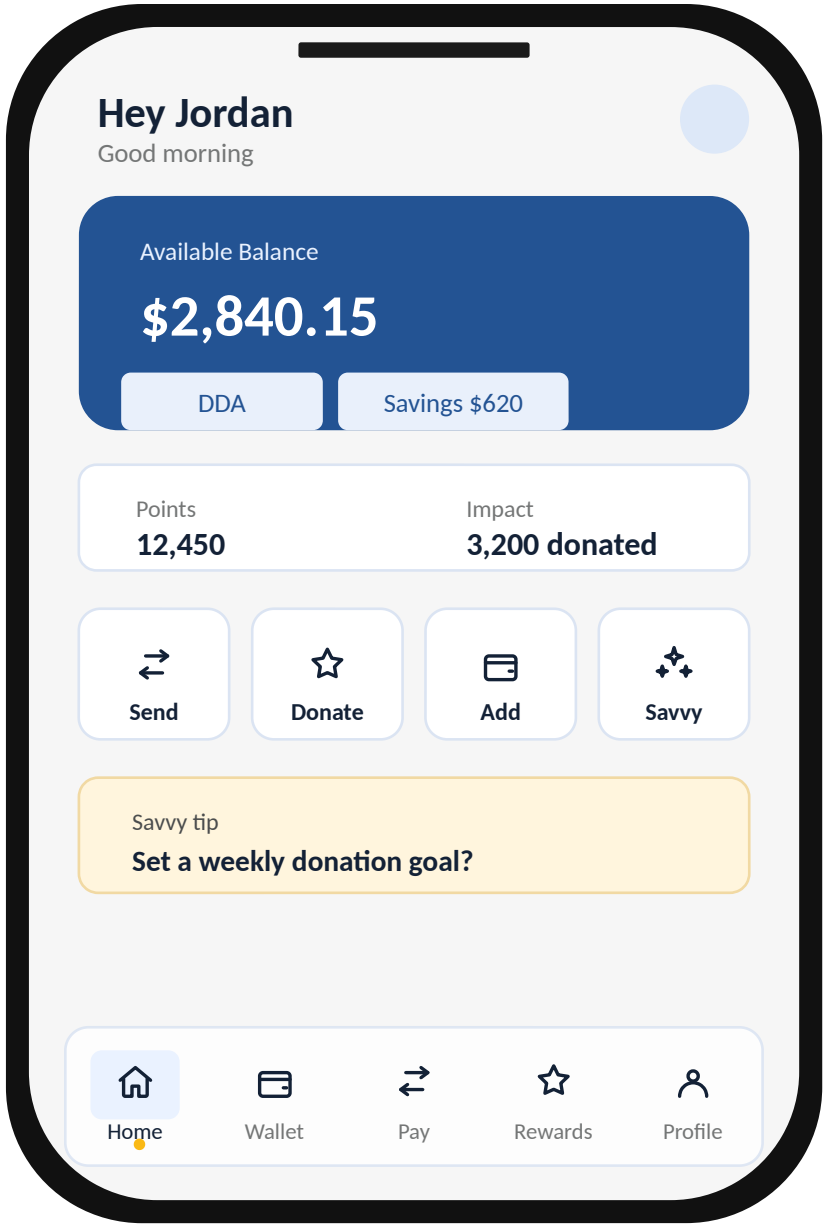
Dark mode



Home screen — aligned (light)

What’s fixed now

- One left edge for all cards
- Consistent vertical rhythm
- Equal card radii & padding
- Bottom nav optically centered

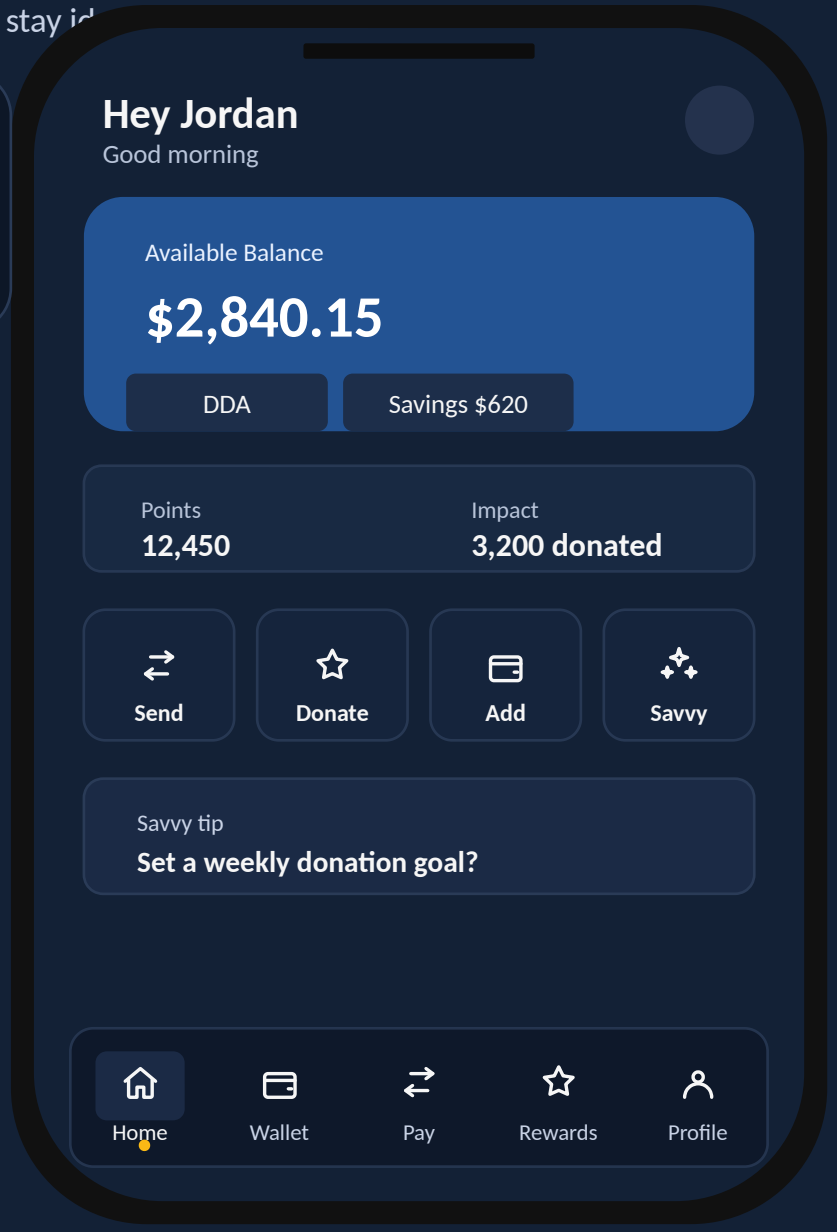


Home screen — aligned (dark)

Dark mode is a theme swap: spacing + constraints stay id

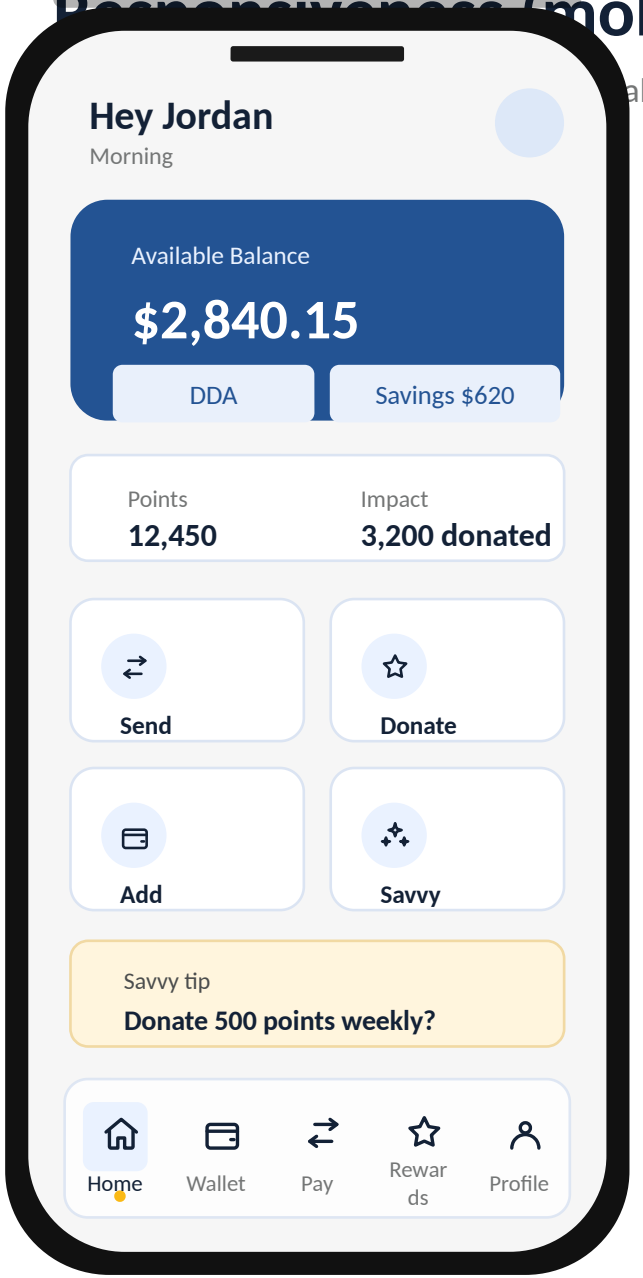
Dark mode accessibility

- Contrast maintained
- Status not color-only
- Amounts stay readable

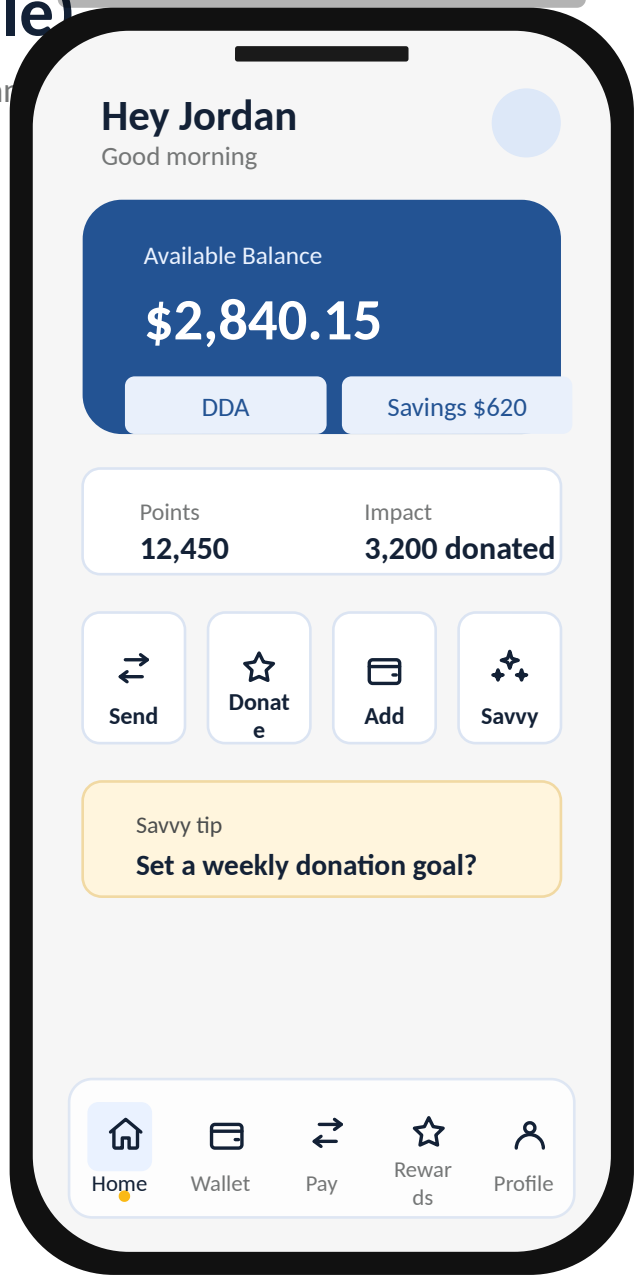


Responsiveness (mobile)

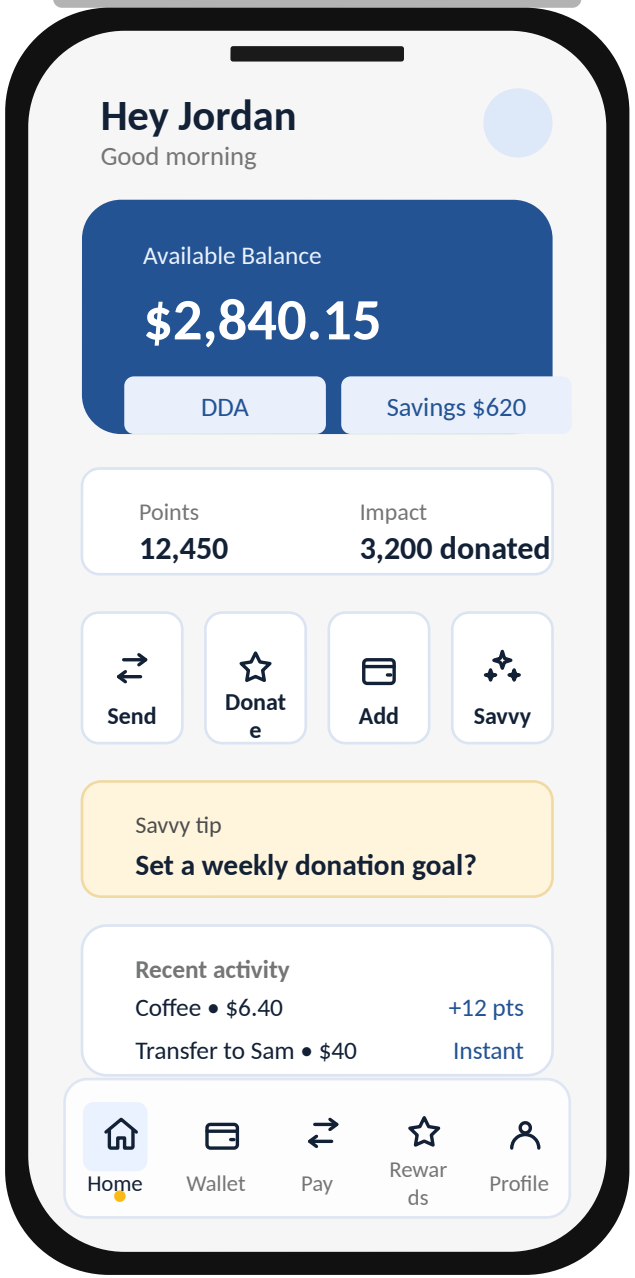
Compact ≤360dp



Standard 390dp



Large ≥415dp



Reflow behaviors: Compact = 2×2 actions • Standard = 1×4 row • Large = adds activity preview

Constraint rules (for engineering)

Cards

- Padding: 16dp
- Radius: 16dp
- Min height: 72dp
- Left edges aligned across screen

Lists

- Row height: 56dp
- Icon: 24dp
- Primary text wraps; never ellipsis $ amounts

Bottom nav

- Height: 72dp
- Floating pill with safe-area inset
- Inactive opacity: 45% (light) / 55% (dark)

Type scaling

- Dynamic Type supported
- Spacing increases; layouts scroll instead of clipping

These constraints keep the UI premium across Gen-Z, Millennials, and Gen-X devices.
