2FA / OTP Opt-In: Dedicated Use Case

AWS 10DLC Compliance — Separate from Marketing & Account Notifications, with Alternative Verification Methods

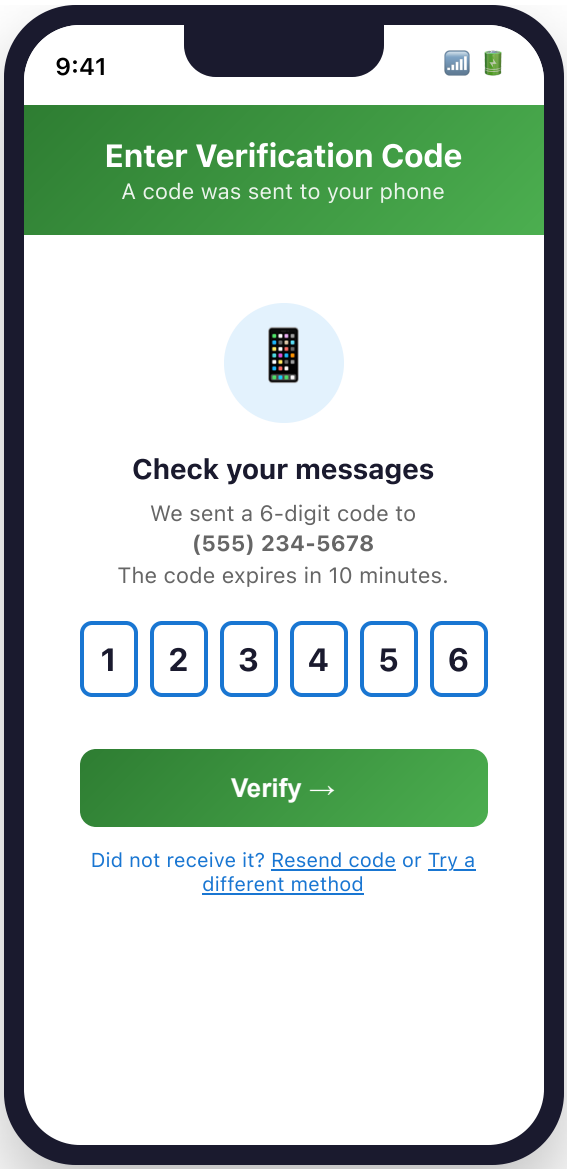

🔒 **2FA messaging is its own dedicated use case. SMS is one of several delivery options — users can also choose Email, Voice Call, or Authenticator App.**

1 2FA Method Selection & OTP Entry Flow

User chooses preferred verification channel — SMS is never the only option

STEP 1: CHOOSE VERIFICATION METHOD

STEP 2: ENTER CODE

Sample 2FA SMS Body (sent only after the user selects "Text Message"):

> Swipe Savvy: Your verification code is **123456**. This code expires in 10 minutes. Do not share. Reply HELP for help, STOP to opt out.

✓ 138 characters (within 160 limit)

✓ 2FA Use Case Compliance Verification

- ✓ **Dedicated Use Case:** 2FA / OTP is registered as its own campaign, separate from marketing & account notifications
- ✓ **Alternative Methods:** Email, Voice Call, and Authenticator App offered alongside SMS

- **SMS Not Forced:** User actively selects SMS as one of four options — default is unselected
- **Transactional Only:** OTP messages contain only the code — never promotional or marketing content
- **Clear Disclosure:** Frequency (up to 3 msgs/sign-in), msg & data rates, STOP / HELP instructions disclosed
- **Channel Switch Anytime:** User can change verification method in Account › Security at any time
